

NPORS Safe Use of Step Ladders & Ladders (includes Inspection)

Course Introduction

Fall from heights represents one of the most common causes of serious accidents that occur in the workplace, many of which involve the use of ladders. With almost all trades employing the use of a ladder at one point or another, it's imperative for operatives to understand how to use them safely.

The course is available as an NPORS accredited programme or can be Alpha Certified. Either way, this half day course will empower students, providing them with the knowledge and competence to minimise the risk of a heights related accident and properly maintain workplace equipment.

This course can be delivered as an In house Qualification ... Please contact the centre for further information

Course Topics

- Legislation, Roles & Responsibilities
- Provision & Use of Work Equipment Regulations
- Risk Assessments & Permits
- Working at Heights Regulations
- Accidents: Causes & Prevention
- Hazard Perception
- Ladder Selection, Inspection and Safe Usage
- Storage & Daily Checks

Course Benefits

This course is suitable for any operative, from trades to engineering, where ladders are used on a day to day basis. Looking at current legislation, roles, responsibilities, hazard perception, risk assessing, ladder inspection and modern safety methods this course will limit the liability of employers whilst, most importantly, safeguarding the health and safety of employees.

Assessment Method

Multiple Choice / Short Answer Examination

Qualification Expiry

3 Years
